

James Courson

A capable developer with an appreciation for clean and concise code. I work most efficiently and enthusiastically in a team setting where I can both motivate and be motivated by my fellow developers.

Experience

InfoBate: Software Developer (September 2020 - present)

- Maintained an internal sales reporting application built on React.
- Supported back end systems using AWS (ECS, Lambda, RDS, S3, SES).
- Created and maintained a Wiki.js application for internal use.
- Created a client-facing React-based brochure/help/FAQ website.

CGI: Consultant (June 2019 - September 2020)

- Worked for a large banking client as a front-end developer on an internal Angular 8 application.
- Studied for and obtained an Oracle Java SE 8 Associate certification.
- Developed and maintained several React and Angular 8 applications, both individually and within a small team using agile practices.

Education

Tech Elevator: .NET Development (December 2018 - April 2019)

- Designed, built, and deployed several full-stack apps both individually and in a small team using source control and agile development practices.
- Learned and practiced many industry-standard concepts of software development.

Pennsylvania State University: Computer Science (August 2017 - September 2018)

- Studied and applied concepts of computer science and software design processes using C++, Python, and JavaScript.
- Learned and practiced web development concepts using HTML/CSS/JavaScript, MySQL, and React.

Personal Project

James' Guide: [james.courson](https://james.courson.dev)

A repository for useful web resources that I frequently use for my skills and hobbies. Built on React, and hosted on GitHub Pages.
